

The Grumpy Queue

Problem ID: grumpyqueue

People are queueing for coffee. A person is *grumpy* if the person *directly* in front of them is taller than they are — they can't see the menu. Count the number of grumpy people.

Input

The first line contains an integer n ($1 \leq n \leq 10^6$), the number of people. The second line contains n integers $h_1, \dots, h_n$ ($0 \leq h_i \leq 10^9$), the heights from the front of the queue to the back.

Output

Output a single integer: the number of positions i ($1 \leq i < n$) with $h_i > h_{i+1}$.

Sample Input 1

```
5
3 1 4 1 5
```

Sample Output 1

```
2
```

Sample Input 2

```
4
1 2 3 4
```

Sample Output 2

```
0
```
